

Using business rules and data services to gain customer insight

Phil Simpson, BRMS Product Marketing Manager
Kenneth Peeples, JBoss Technology Evangelist

May 24, 2013

JBoss Fuse Getting Started

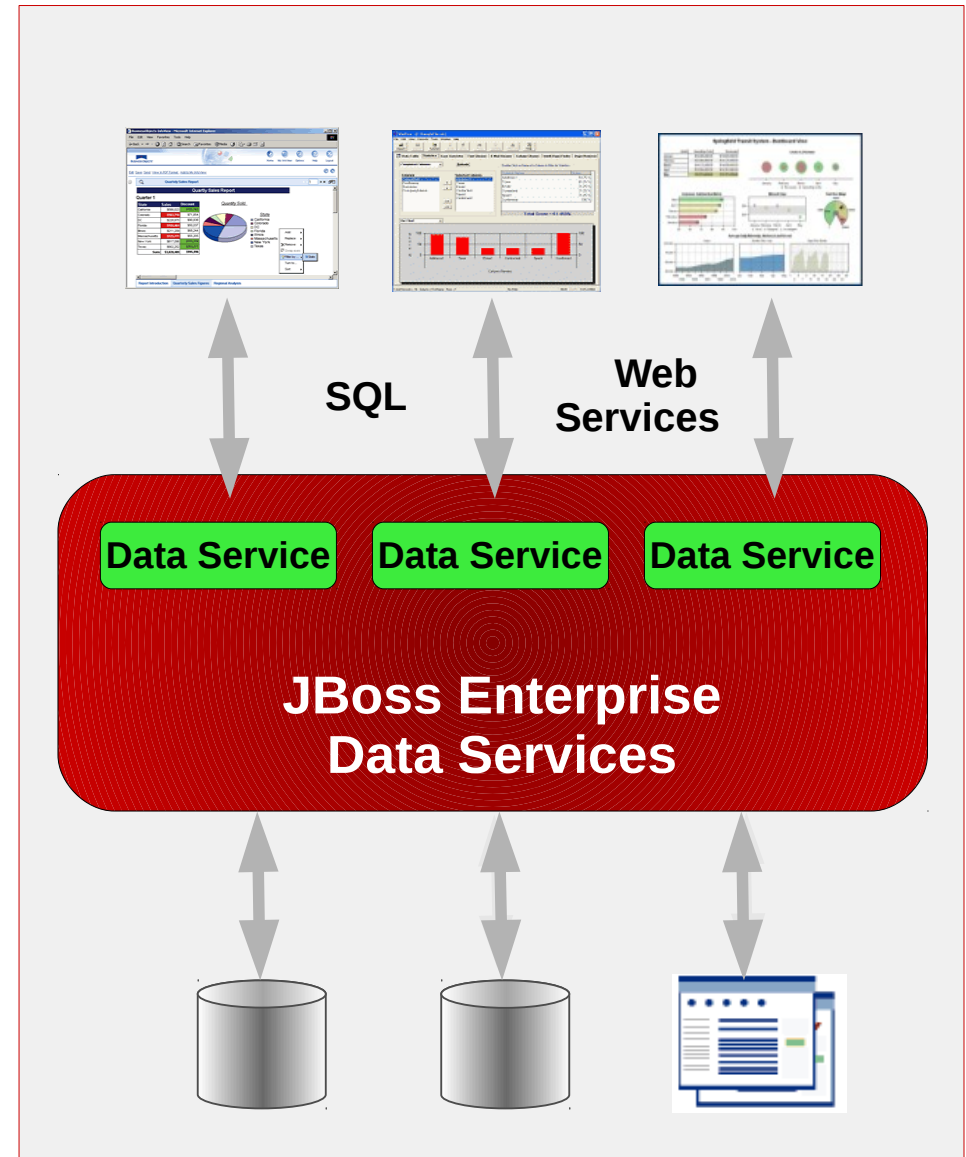

- Part 1 – Business Rules Overview – Phil Simpson (20 minutes)
- Part 2 – Data Services Overview – Kenneth Peeples (10 minutes)
- Part 3 - Demonstration of using Business Rules with Enterprise Data Services – Kenneth Peeples (20 minutes)
- Part 4 – Question and Answer Session - Phil and Kenneth (10 minutes)

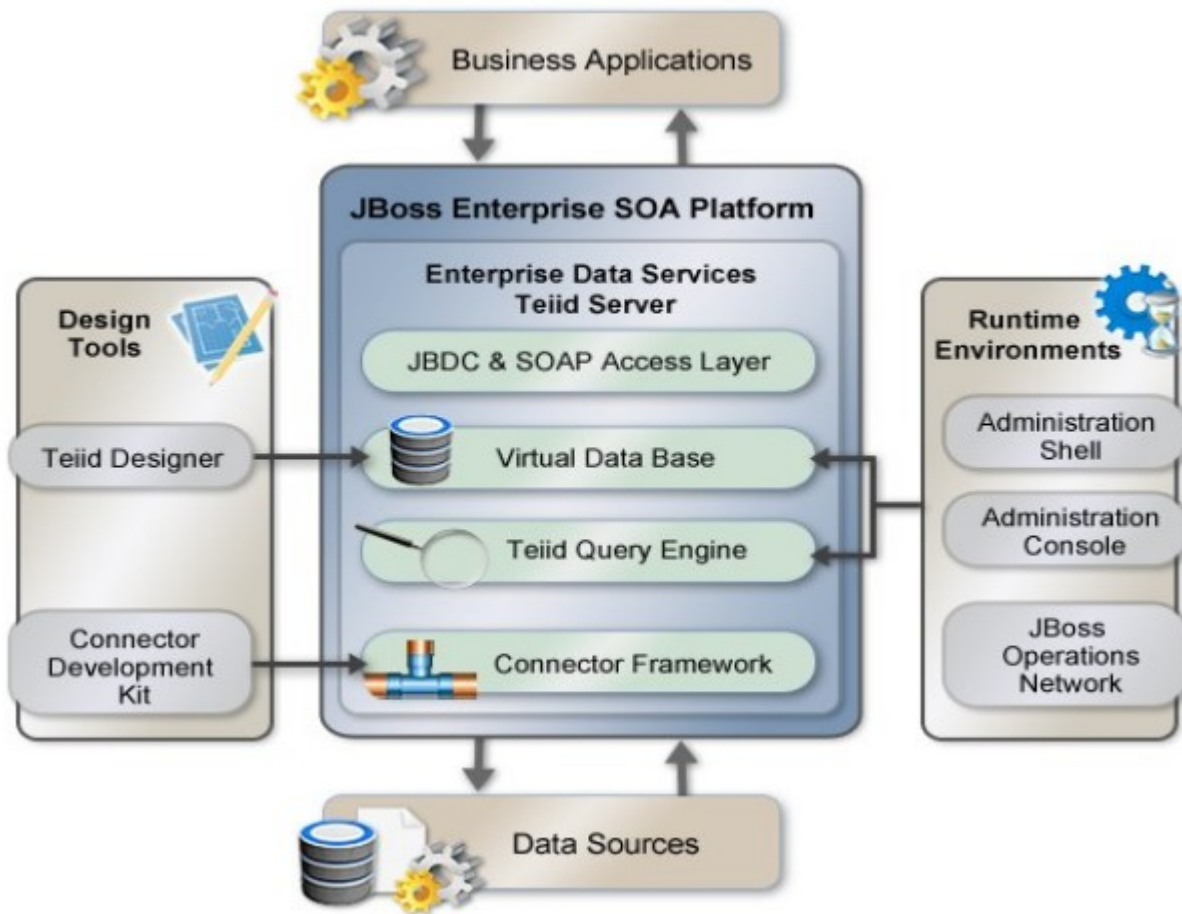

Part 2: Data Services Overview – Kenneth Peeples

JBoss Enterprise Data Services

- **Turn the data you have into the information you want.**
- Standards-based read/write access to heterogeneous data stores in real time.
- Speeds application development by simplifying access to distributed data.
- Transforms data structure and semantics through data virtualization.
- Consolidates data into a “single view” without the need for more data.
- Centralized access control, auditing through robust security infrastructure.
- Creates services that provision data to business process in your SOA.
- Enterprise-proven – flexible, scalable,

Data Services (Teiid) Architecture

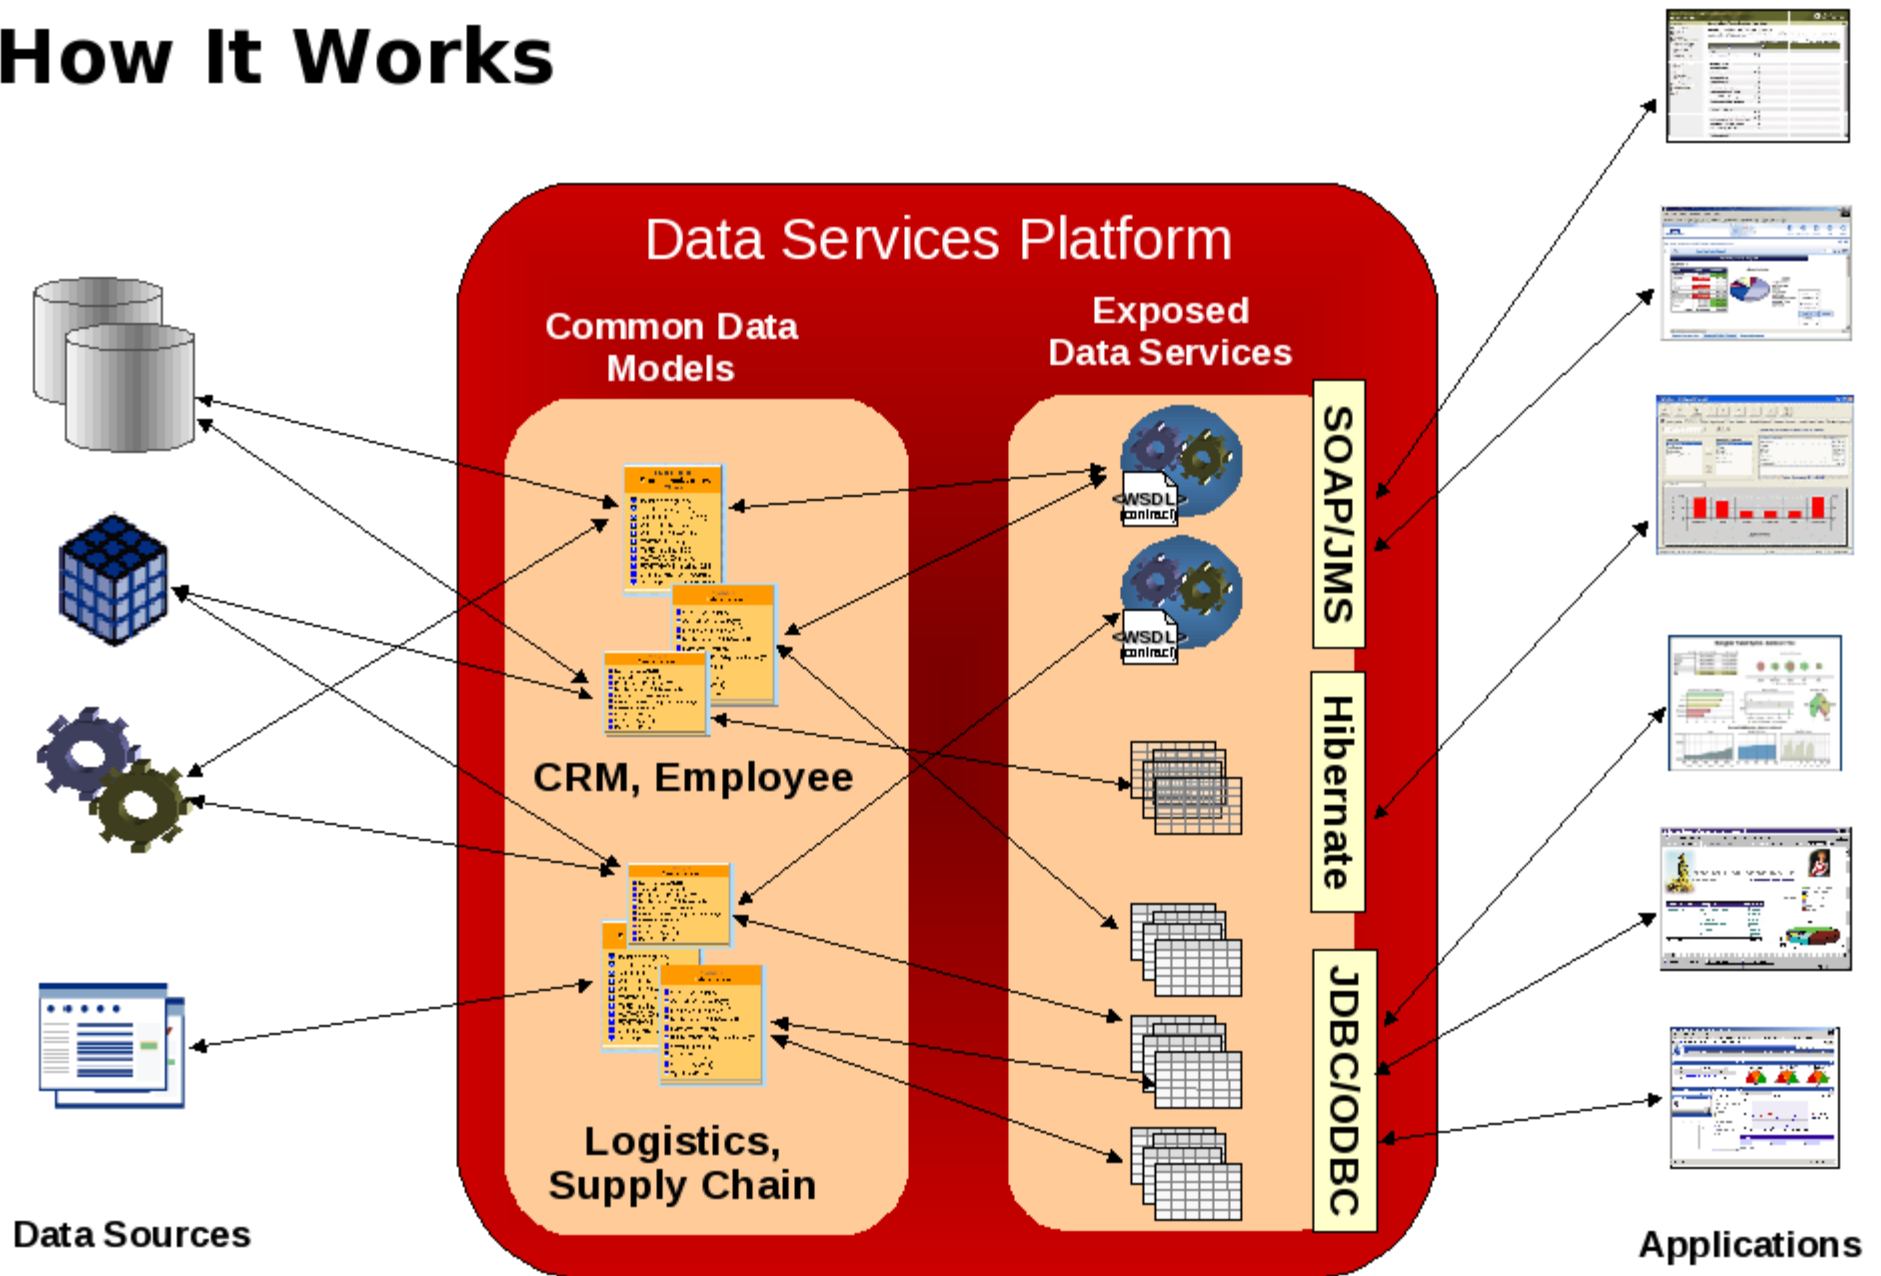

- JBoss Enterprise Data Services Platform is a data federation and virtualization engine (the Teiid Server) that allows you to query multiple data sources (RDBMSs, web services, files, applications, etc) as though they were a single unified source.

- It builds on the JBoss EAP and SOA Platforms and includes model-driven development tools and rich management capabilities along with a robust runtime

- The Teiid Server Runtime executes as an additional service/capability within the JBoss container.

How It Works

What does Data Services/Teiid do?

Data Virtualization, with a focus on optimized real-time access.

Like a database, but the planner and optimizer are geared to data integration.

- Query decomposition/push-down
- XA Transactions for writes

Convenient relational abstraction with lots of other features

- XML Document Models
- SQL Views, Procedure language, XQuery integration
- Available as a JDBC driver, includes optional ODBC driver
- Built-in integration with RDBMSs, XML sources, LDAP, Salesforce, Services etc.

Tight integration with Teiid Designer

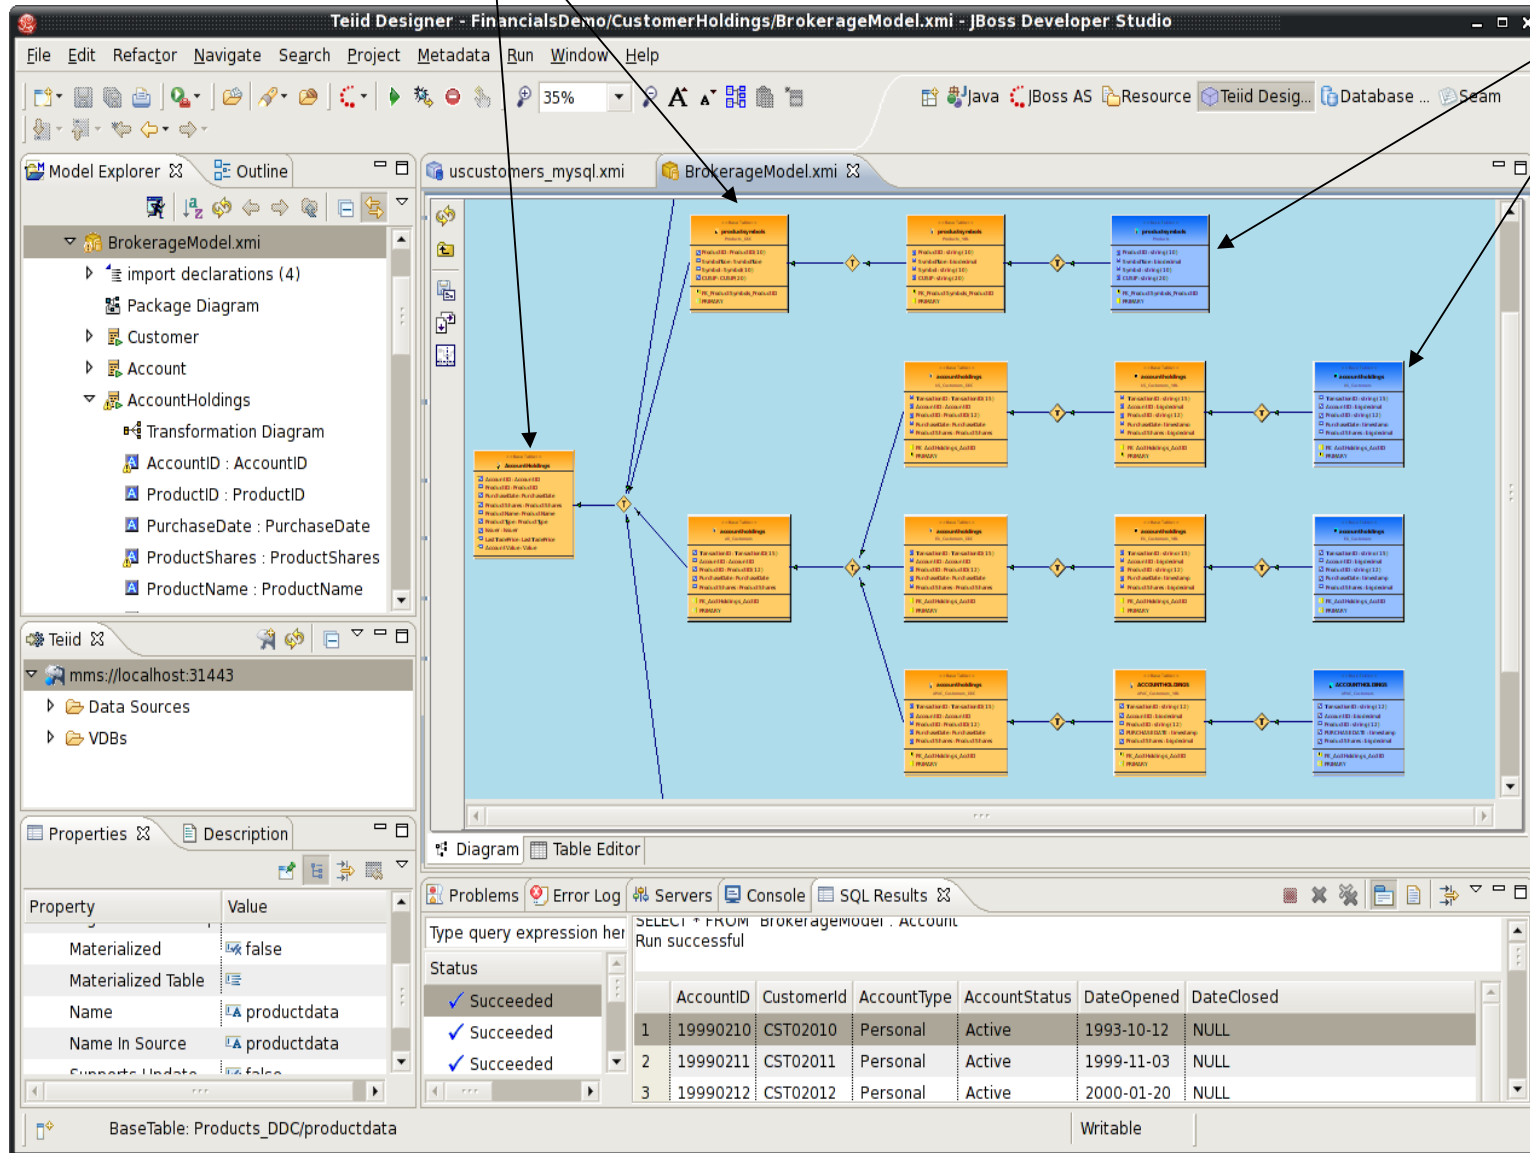

What does Teiid Designer do?

- Creates source models
 - By importing metadata
 - By manually defining metadata
- Creates view models
- Creates Virtual Databases (VDB)
- Uses Teiid (integrated with the Designer) to allow querying models prior to deployment

JBoss Developer Studio - Designer Tooling

Logical Models

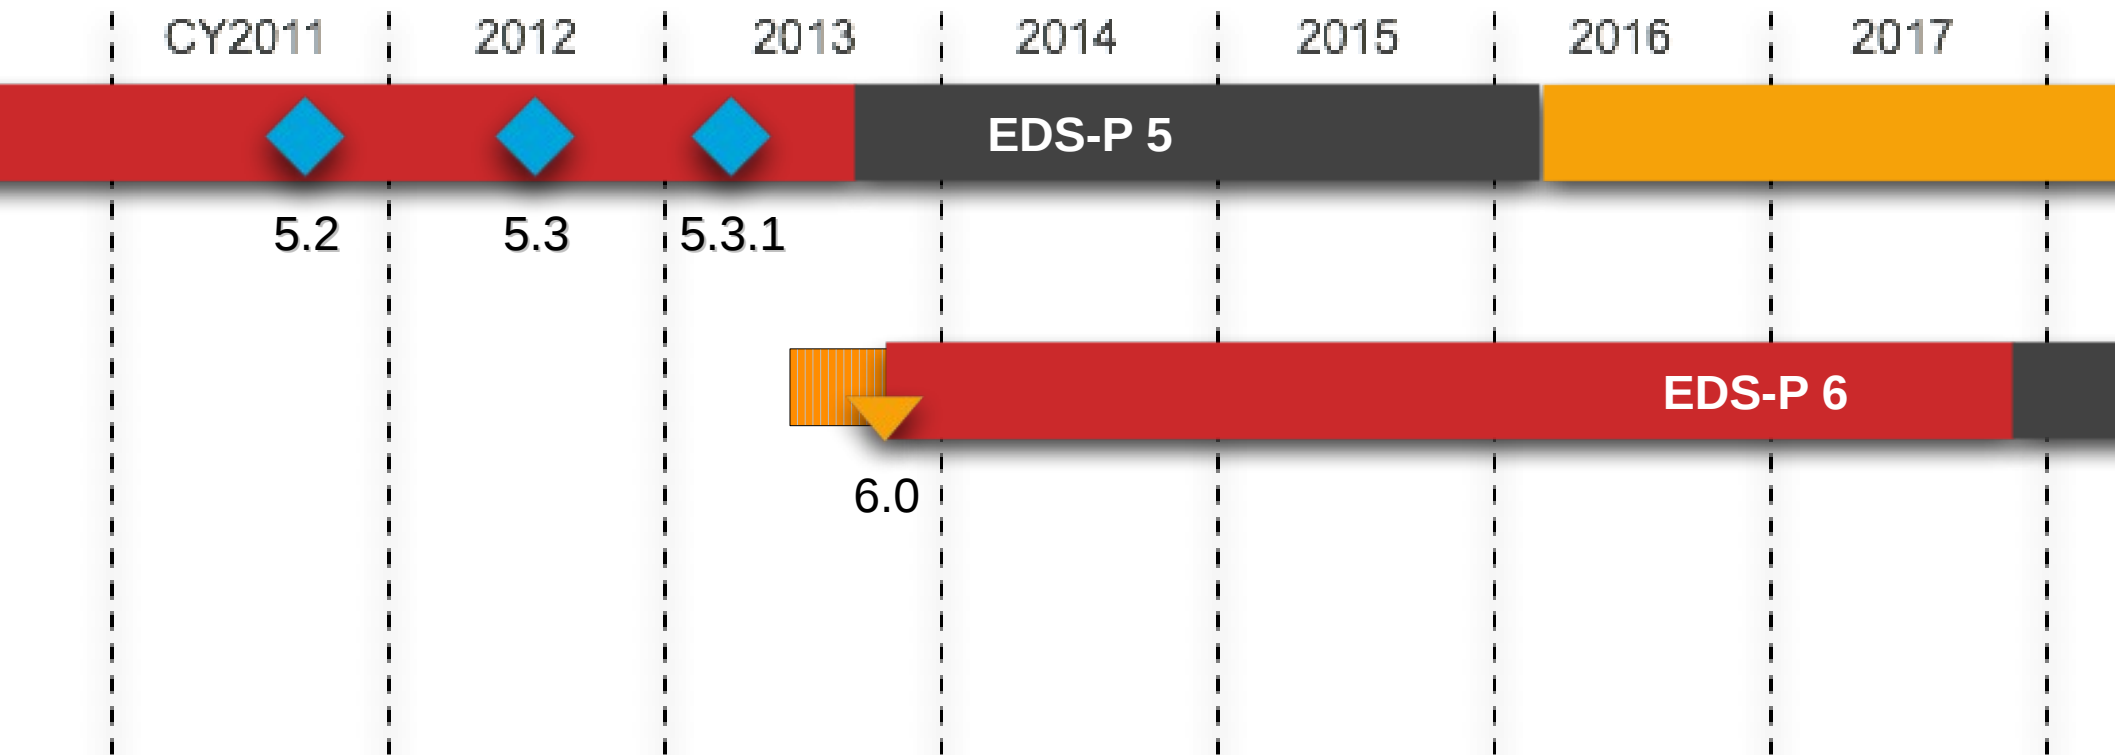

Physical Models representing
actual data sources

- Shows structural transformations
- Defines transformations with
 - Selects
 - Joins
 - Criteria
 - Functions
 - Unions
 - User Defined

JBoss Enterprise Data Services Roadmap

Subject to Change

EDS 5.3.1 (Released Feb/CY13)

- Java 1.7 support
- Additional certifications
- Fixes/updates

EDS 6.0 (Target : Q4/CY13)

- Teiid 8, S-RAMP/ModeShape 3.
- Lightweight footprint / EAP 6
- Decoupling from SOA runtime
- Updated tooling
- Many new features

Upcoming New Features

- DDL Based View Definitions in Dynamic VDBs
- VDB import/reuse
- VDB deployment improvements
- Native Queries
- OData Support
- Procedure Exception Handling
- NoSQL sources
- JSON production
- Source temporary tables
- Teiid Designer 8
- OpenShift

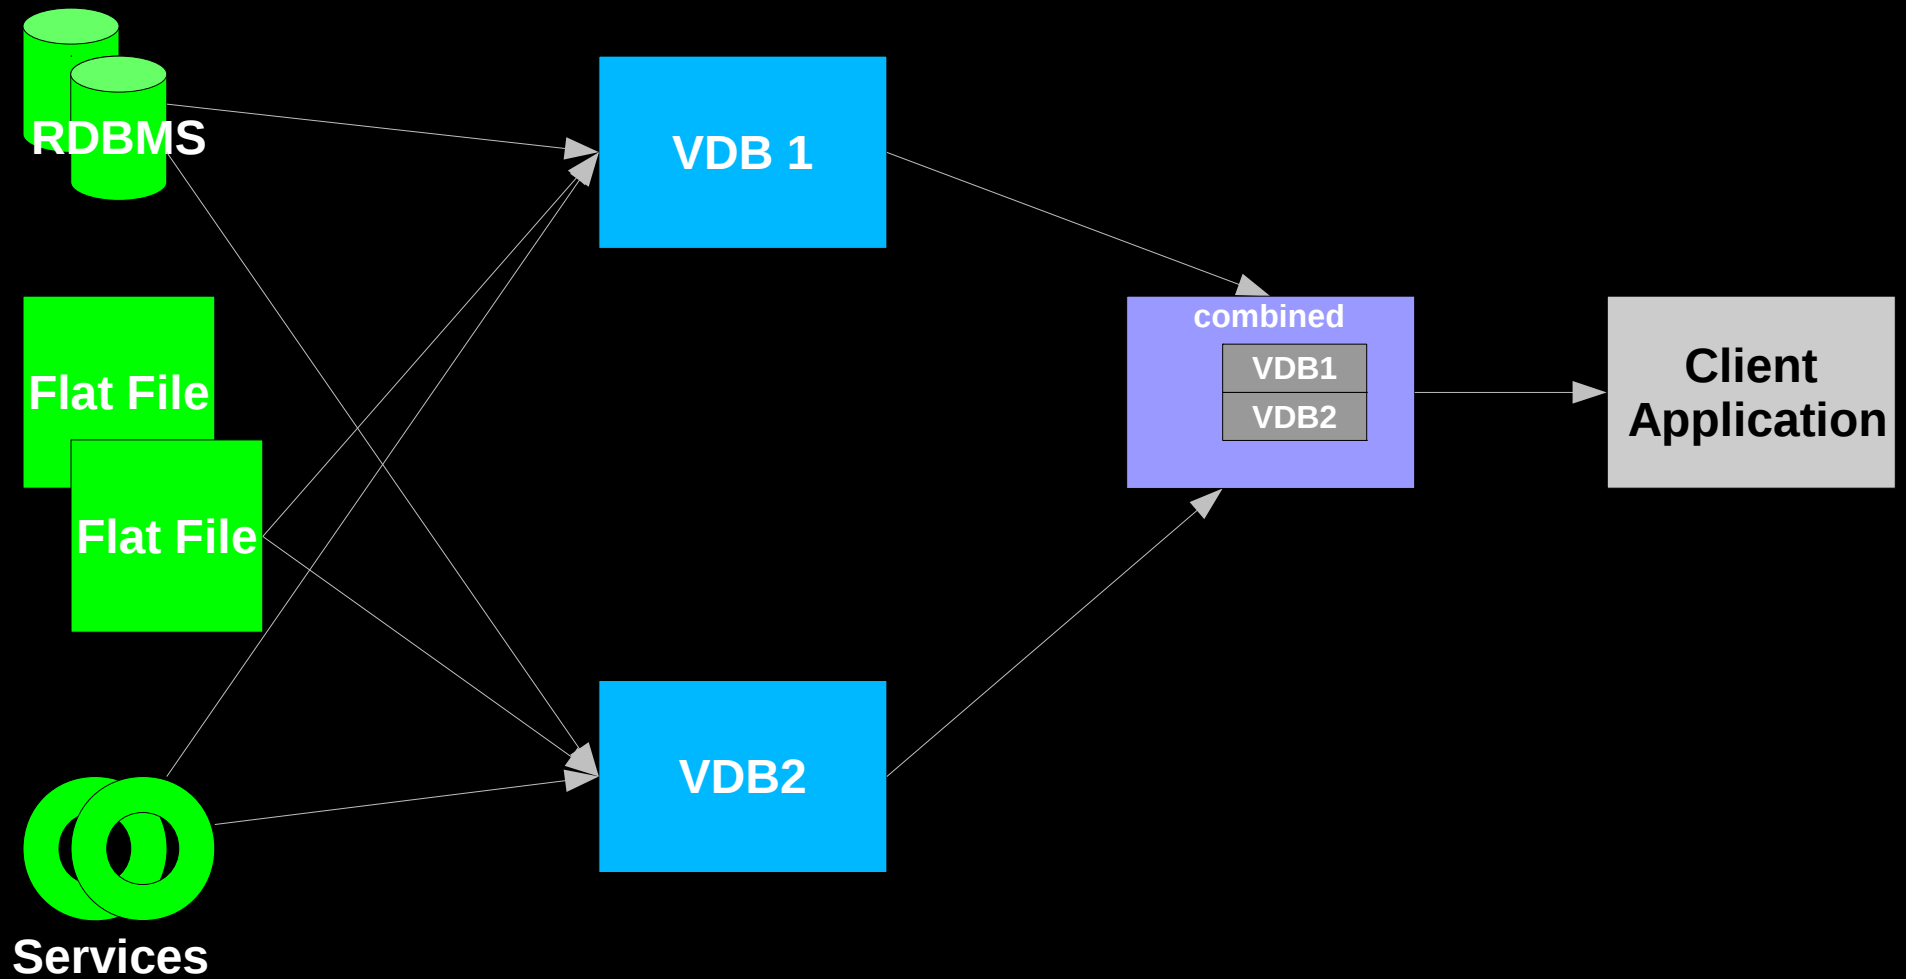

You can access these features in Teiid community releases now

DDL-based Dynamic View Creation

- **Unique among data virtualization technologies/vendors**
- **Programmatic configuration**
- **In Teiid 7.7/EDS 5.x, DDL could only specify integration between multiple physical sources.**
- **In Teiid 8/EDS 6, DDL can be used to specify view definitions.**

VDB Import/Reuse Feature

VDB Imports/Reuse

- Enables and promotes enterprise/project/domain wide canonical data model
- Hides the complexity from application developers
- Improves the performance when “stacking” VDBs
- Treats it as single source
- Keeps one copy of materialization results per VDB

Native Query Support

Source Table Metadata

- Specified as metadata property on source table:
 - `native-query="select c from g"`
- Produces source query with inline view:
 - `"SELECT c FROM (select c from g) as x"`

Native() Procedure

- Allow ad-hoc native SQL to be passed to source. Metadata structure defined at execution.
 - `SELECT x.* FROM (call pm1.native('select * from g1')) w,
ARRAYTABLE(w.tuple COLUMNS "e1" integer , "e2" string) AS x`

PARTICIPATION IN STANDARDS BODIES

OData (OASIS Open Data Protocol)

https://www.oasis-open.org/committees/tc_home.php?wg_abbrev=odata

Objective: OASIS OData TC works to simplify the querying and sharing of data across disparate applications and multiple stakeholders for re-use in the enterprise, Cloud, and mobile devices. A REST-based protocol, OData builds on HTTP, AtomPub, and JSON using URIs to address and access data feed resources. It enables information to be accessed from a variety of sources including (but not limited to) relational databases, file systems, content management systems, and traditional Web sites.

S-RAMP (OASIS SOA Repository Artifact Model and Protocol)

<https://s-ramp.org>

<http://github.com/governance>

Objective: define common data model and APIs to store and manage SOA artifacts throughout their lifecycle.

Part 3: Demonstration of using Business Rules with Enterprise Data Services – Kenneth Peeples

Topics Covered to build the example project

- 1) Show multiple data sources with EDS including salesforce.com and text file
- 2) Show how to use business rules with the data
- 3) Show how to build, deploy and test the project through the IDE

Prerequisites

Maven 3.0.3 or higher

JDK 1.7

JBoss Developer Studio 6

- JBoss SOA-P 5

Source to be posted with Video

<https://github.com/kpeeples/eds-brms-salesforce.git>

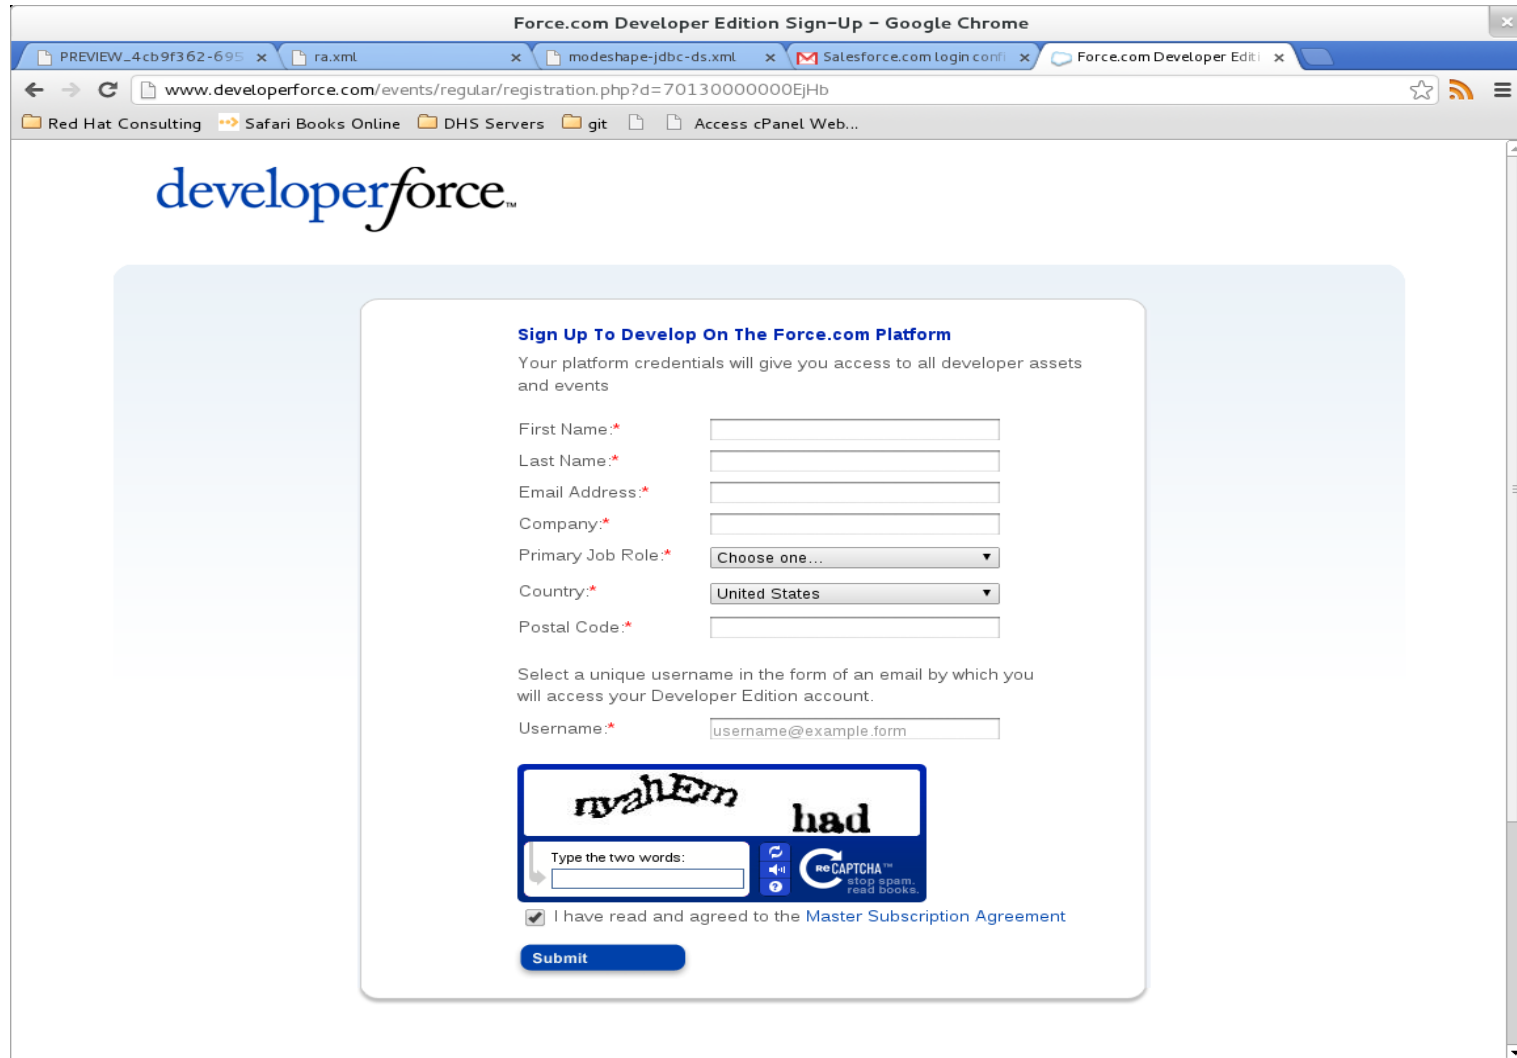

Steps to create the example project

Scope: Get opportunities from a salesforce.com VDB with a opportunity line items that match the product codes from a text file VDB and then execute a business rule to find those opportunities with total price above 100k.

Step 1 – Setup salesforce.com developer account with token for API access

<http://www.ossmentor.com/2013/05/using-enterprise-data-services-teiid-to.html>

Create a Developer Force Account

The screenshot shows a web browser window with the title "Force.com Developer Edition Sign-Up - Google Chrome". The address bar displays the URL "www.developerforce.com/events/regular/registration.php?d=70130000000EjHb". The browser's tab bar shows several open tabs, including "PREVIEW_4-cb9f362-695", "ra.xml", "modeshape-jdbc-ds.xml", "Salesforce.com login confi", and "Force.com Developer Editi". The browser's bookmark bar contains "Red Hat Consulting", "Safari Books Online", "DHS Servers", "git", and "Access cPanel Web...".

The main content area features the "developerforce" logo at the top. Below it, a light blue box contains the sign-up form. The form is titled "Sign Up To Develop On The Force.com Platform" and includes the text "Your platform credentials will give you access to all developer assets and events".

The form fields are as follows:

- First Name:*
- Last Name:*
- Email Address:*
- Company:*
- Primary Job Role:*
- Country:*
- Postal Code:*

Below these fields, there is a text input for "Username:*" with the placeholder text "username@example.com".

Below the username field, there is a CAPTCHA image showing the words "nvahEm" and "had". Below the CAPTCHA, there is a text input for "Type the two words:". Below the text input, there is a checkbox labeled "I have read and agreed to the Master Subscription Agreement".

At the bottom of the form, there is a blue "Submit" button.

Reset Security Token

The screenshot shows a web browser window titled "Reset Security Token ~ salesforce.com - Developer Edition - Mozilla Firefox". The address bar displays the URL: `https://na15.salesforce.com/_ui/system/security/ResetApiTokenEdit?retURL=`. The browser's bookmark bar includes folders like "ETL", "Fuse Webinar", "Red Hat Consulting", "git", "Personal", "TMM", "home", and a bookmark for "Gene Wilder - Wikiped...".

The Salesforce interface features a blue header with the "salesforce 13" logo, a search bar, and user information for "Kenneth Peeples" with links for "Help" and "Sales". A navigation bar below the header lists various Salesforce modules: Home, Chatter, Campaigns, Leads, Accounts, Contacts, Opportunities, Forecasts, Contracts, and Cases.

The left sidebar contains a "Quick Find" search bar and a list of navigation links under "Force.com Home" and "System Overview". The "Personal Setup" section is expanded, showing "My Personal Information" with links for "Personal Information", "Change My Password", and "Reset My Security Token" (which is highlighted). Other links in the sidebar include "My Groups", "Change My Display", "Grant Login Access", "Calendar Sharing", "Reminders", "Email", "Import", and "Desktop Integration".

The main content area is titled "Reset Security Token" and includes a "Help for this Page" link. A yellow warning box with a padlock icon states: "Clicking the button below invalidates your existing token. After resetting your token, you will have to use the new token in all API applications." Below this, a text block explains that a security token is required for API access from outside trusted networks. An information icon (i) is followed by a note: "Your security token is tied to your password and subject to any password policies your administrators have configured. Whenever your password is reset, your security token is also reset." Another text block states: "For security reasons, your security token is delivered to the email address associated with your account. To reset and send your security token, click the button below." A "Reset Security Token" button is located at the bottom of this section.

A "Chat" button is visible in the bottom right corner of the page.

Reset Security Token

Help for this Page ?

 A new security token has been sent to salesforcedhatest@gmail.com, which is the email address associated to your user.

How to enter your security token:

When accessing salesforce.com either via a desktop client or the API from outside of your company's trusted networks:

If your password = "mypassword"
And your security token = "XXXXXXXXXX"
You must enter "mypasswordXXXXXXXXXX" in place of your password

Note that you do not enter a security token in place of your password when logging into salesforce.com via a browser.

Chat

Steps to create the example project

Step 2 – Build and deploy the data source and VDB for Salesforce.com and text file

- Import from salesforce to build source model
- Import from Text file, which will build a source model (which has the getTextFiles function) and a view model for viewing the contents of the file
- Package VDB to include salesforce and text file models, and then deploy the VDB

Cheat

Create and test a VDB

Introduction

This cheat sheet shows you how to create a VDB and test it.

[Click to Begin](#)

Create VDB

Follow the steps below to create a new VDB

Launch New VDB Wizard

1) Select "... " button to browse and select project or folder location.

2) Enter a unique name for your VDB

Problems Error Log Console Servers SQL Results Teiid Execution Plan Console System Catalog

Type query expression here

Steps to create the example project

Step 3 – Build the POJO's

Step 4 – Build the business rule that will verify the opportunities with products with a total price above 100k
-package POJO's and .drl rules file into jar
-deploy jar (place in the server/<config>/lib directory)

Step 5 – Execute the business rule

http://docs.jboss.org/drools/release/5.5.0.Final/drools-expert-docs/html_single/index.html#d0e8782

Teiid v8 (EDS 6) Quickstart with drools integration

- Demonstrates how to integrate drools so that business rules can be triggered based on the data moving through Teiid by using a UDF (User Defined Function)
- This quick start demonstrates one way to execute a set of business rules on a set of data. In this example, the execution of the rules will be triggered by calling the UDF (User Defined Function) from a virtual procedure, capturing the errors that occurred, and returning that error list to the client.
